

PLC Fiber Splitter, Standard LGX Cassette, Singlemode

Data Center & Cloud Computing Infrastructure Solutions

Overview

Planar lightwave circuit (PLC) splitter is a type of optical power management device that is fabricated using silica optical waveguide technology to distribute optical signals from Central Office (CO) to multiple premise locations. It features small size, high reliability, wide operating wavelength range and good channel-to-channel uniformity. These are widely used in PON networks to realize optical signal power splitting as a low-cost solution.

FS.COM provides whole series of 1xN and 2xN splitter products that are tailored for specific applications.
