

Optical Line Protection Switch (OLP)

Plug-in Card Type

OTN Solutions for Metro, Regional & Long Haul

Description

Optical Line Protection Switch (OLP) is a product that is used in the protection of network transmission line. By real-time monitoring the power status in working fiber, it can automatically switch from working fiber to backup fiber when the power value of working fiber is lower than a user defined threshold, achieving line protection of optical transmission system.

OLP(Optical Line Protection) is a device that is used in the protection of network transmission line, it can realize optical power monitoring and automatic switching. In optical communication network, OLP monitors optical power of optical fiber and standby optical fiber at real time. In case the current optical power of optical fiber is less than pre-set switching threshold value, then alarm is on and it would

switch to standby optical fiber automatically to protect optical transmission system line.
