

# 26dB Gain Pre-Amplifier DWDM EDFA C-band 16dBm Output

Plug-in Card Type for FMT Multi-Service Transport System

## Description

The multi-channel Pre-Amplifier DWDM EDFA features stable output power, low noise and power consumption. The kernel components of the product are high-availability pump laser and high-performance gain flattening filters.

Both input and output signals are sampled and monitored with a feedback circuit. AGC (Automatic Gain Control) circuit is designed into the amplifier to ensure high output power stability and reliability.

## Features

- Prevent the eyes from highlight
- Support single and dual fiber operation
- Highly integrated with FMT management platform
- Support up to 48ch DWDM wavelengths in the C-band
- Support AGC (Automatic Gain-Control) operation modes
- Front panel blue display, show various main work status parameters
- Online status LEDs and LCD for monitoring and alarm on the EDFA input and output

## Application

- C-band 40CH DWDM
- Other optical systems
