

Corning® LEAF® Optical Fiber

Product Information

CORNING

In the race to satisfy the global demand for bandwidth, Corning® LEAF® optical fiber is the clear winner as the world's most widely deployed non-zero dispersion shifted fiber (NZ-DSF). Optimized for long-haul and metro networks, LEAF fiber is a technically advanced product that provides high capacity, broad system flexibility, and superior performance. Additionally, LEAF fiber is the industry leader in polarization mode dispersion (PMD) specifications and has the lowest attenuation of any NZ-DSF on the market today, enabling networks to evolve from the current 10G to the 40G and 100G systems of the future.

1525 – 1575	1550	0.02
1625	1550	0.03

The attenuation in a given wavelength range does not exceed the attenuation of the reference wavelength (λ) by more than the value α.

Wavelength (nm)	MFD (μm)
1550	9.6 ± 0.4

Dispersion

Wavelength (nm)	Dispersion Value [ps/(nm·km)]
1530	2.0–5.5
1565	4.5–6.0
1625	5.8–11.2

Polarization Mode Dispersion (PMD)

	Value (ps/√km)
PMD Link Design Value	≤ 0.04*
Maximum Individual Fiber PMD	≤ 0.1

*Complies with IEC 60794-3: 2001, Section 5.5, Method 1, (m = 20, Q = 0.01%), September 2001.

The PMD link design value is a term used to describe the PMD of concatenated lengths of fiber. This value represents a statistical upper limit for total link PMD. Individual PMD values may change when cabled. Corning's fiber specification supports emerging network design requirements for high-data-rate systems operating at 10 Gb/s rates and higher.
