# Optical Performance Monitoring(OPM)

Plug-in Card Type for FMT Multi-Service Transport System OTN Solutions for Metro, Regional & Long Haul

## Description

Optical performance monitor uses proprietary thin-film interference filter technology combined with a micro-actuator and high-speed electronics.

OPM is used to measure critical information data on optical transmission signals in DWDM networks for monitoring signal dynamics, determining system functionality, identifying performance change, and providing feedback for controlling network elements so as to optimize operational performance.

OPM monitors each channel within a DWDM system to understand the signal status and signal quality more clearly and intuitively, which is helpful for network maintenance and troubleshooting.

## Features
