

S2800S Series Switches

GIGABIT SMART MANAGED SWITCHES FOR ESSENTIAL NETWORK NEEDS OF SMB

Models: S2800S-8T2F-P; S2800S-8T; S2800S-24T4F-P; S2800S-24T2F; S2800S-48T4F

Overview

With the growth of virtualization, cloud-based services, and applications such as VoIP, video streaming, and IP surveillance, simple network equipment has been unable to meet the needs of SMBs for network application expansion.

The new S2800S series smart-managed switches achieve a perfect balance between performance and ease of use.

The S2800S switches integrate L2+ functions such as 802.1Q VLAN and port-based VLAN, QoS, IGMP Snooping, LACP link aggregation, Static Routing, Etc., providing more cost-effective options for SMBs.

Benefits

- Layer 2+ Switch
- CLI/WEB UI/Telnet/SSH Management
- Varied QoS Policies
- Complete Security Polices
- Powerful ACL Functions
- Simple and Easy Network Maintenance
- Comply with IEEE 802.3af/at power supply standard

Key Features

Enterprise-Level Features

S2800S supports a complete lineup of L2+ features, including 802.1Q VLAN, port mirroring, STP/RSTP/MSTP, link aggregation control protocol, and 802.3x flow control. Advanced IGMP snooping ensures that the switch intelligently forwards multicast streams only to appropriate subscribers, thereby cutting off unnecessary traffic. At the same time, IGMP throttling and filtering restrict each subscriber at the port level to prevent unauthorized multicasting access. Static routing is a simple way to segment the network and route traffic internally through switches to increase efficiency.

Enhanced QoS

Voice and video traffic can be prioritized based on IP address, MAC address, TCP port number, UDP port number, Etc. With QoS (Quality of Service), voice and video services stay lag-free even when bandwidth is insufficient.

Robust Multicast Control

IGMP snooping prevents the flooding of multicast traffic by dynamically configuring switch ports so that multicast traffic is forwarded to only those associated with an IP multicast receiver. As a result, IGMP increases the performance of networks by reducing multicast traffic flooding.

Reliability and Energy Efficiency

The fanless design of S2800S-8T2F-P, S2800S-8T, and S2800S-24T2F ensures noise-less operation and increases the reliability of the system. The design of the S2800S series switches incorporates high energy efficiency in order to reduce the impact on the environment. In addition, the Green Ethernet power-saving features and fanless design significantly reduce the power consumption.

Network Security

Security features include IP-MAC-Port-VID binding, port security, storm control, and DHCP snooping to defend against a series of network threats. A comprehensive list of common DoS attacks is provided, making it easier than ever to prevent these attacks. In addition, the access control list (ACL, L2 to L4) function restricts access to sensitive network resources by denying data packets based on source and destination MAC addresses, IP addresses, TCP/UDP ports, or VLAN IDs. The user's network access can be controlled through 802.1X authentication, which is used in conjunction with a RADIUS server to grant access only when valid user credentials are provided.

Easy Management and Maintenance

Support many management modes such as the CLI, WEB UI, SNMP. Support FTP, TFTP.

WEB UI management mode is easy and efficient for installing and debugging the device. SNMP smart network management platform. The combination realizes automatic equipment discovery, network topology management, equipment configuration management, performance data statistics and analysis and trouble management.

Technical Specification

S2800S series switches come with advanced hardware architecture design L2+ features. Here's a look at the details.
