

AP-W6D1775C

# ENTERPRISE WI-FI 6 WALL PLATE ACCESS POINT

Quick Start Guide **V1.0**

# Introduction

Thank you for choosing the enterprise Wi-Fi 6 access point. This guide is designed to familiarize you with the layout of the access point and describes how to deploy the access point in your network.

AP-W6D1775C

## Accessories

Screw x2

## Optional (Not Included)

Screwdriver x1

Flathead Screwdriver x1

# Hardware Overview

## Ports

Ports	Description
LAN	10/100/1000Base-T LAN port
WAN/PoE	10/100/1000Base-T Ethernet WAN port, PoE and PoE+ capable
Micro USB	Micro USB management port (Console)
Power	Port for local power supply

## Button

Button	Description
Reset	Restart: Press the Reset button for less than two seconds.
	Restore to Factory Default Settings: Press and hold the Reset button for more than three seconds.

LEDs

FAT AP:

Status	Frequency	Description
Off	N/A	The AP is powered off, or the AP is in Silent mode, which can be disabled via software.
Fast Blinking Green Before Solid Green	2.5Hz (fast blinking green)	Initialization is in progress. The AP is operational.
Fast Blinking Red	2.5Hz	Firmware upgrade in progress. Do not power off the AP.
Blinking Red	1Hz	AP is operational and Ethernet link is down.
Blinking Green	1Hz	AP is operational.

FIT AP:

Status	Frequency	Description
Off	N/A	The AP is powered off, or the AP is in Silent mode, which can be disabled via software.
Fast Blinking Green Before Solid Green	2.5Hz (fast blinking green)	Initialization is in progress. The AP is operational.
Fast Blinking Red	2.5Hz	Firmware upgrade in progress. Do not power off the AP.
Blinking Red	1Hz	AP is operational and Ethernet link is down.
Blinking Green	1Hz	AP is operational and Ethernet link is up. CAPWAP error.
Slow Blinking Green	0.4Hz	AP is operational and CAPWAP connection is established. At least one client is associated.

## Installation Requirements

- Install the AP indoors.
- Do not power the AP during installation.
- Install the AP in a well-ventilated location.
- Place the AP in a dry area and avoid liquid intrusion.
- Keep the AP clean and dust-free.
- Keep away from high voltage cables.
- Do not subject the device to high temperatures.
- Do not expose the device in a thunderstorm or strong electric field.

# Mounting the Access Point

## Wall Plate Mounting

1. Use a flathead screwdriver to remove the cover plate as constructed in the following figure.

2. Connect the uplink cable to the WAN/PoE port

3. Align screw holes on both sides of the device over those on the faceplate. And then tighten screws with a screwdriver.

4. Install the cover plate in the way as shown in the following figure.

5. Complete the installation.

## Connecting the PoE Power Supply

### PoE Switch

Use an Ethernet cable to connect the WAN/PoE port on the AP to the PoE port on a PoE switch.

### PoE Injector

Use the power cord, power injector and Ethernet cable to connect the WAN/PoE port of the AP to the local power source.

# Configuring the Access Point

## Configuring the AP Using the Web-based Interface

Step 1: Connect the computer to the WAN/PoE port of the AP using the network cable.

Step 2: Set the IP address of the computer to **192.168.1.x**. ("x" is any number from 2 to 254.)

Internet Protocol Version 4 (TCP/IPv4) Properties

General

You can get IP settings assigned automatically if your network supports this capability. Otherwise, you need to ask your network administrator for the appropriate IP settings.

☐ Obtain an IP address automatically

☒ Use the following IP address:

IP address: 192 . 168 . 1 . 2

Subnet mask: 255 . 255 . 255 . 0

Default gateway: . . .

☐ Obtain DNS server address automatically

☒ Use the following DNS server addresses:

Preferred DNS server: . . .

Alternate DNS server: . . .

☐ Validate settings upon exit

Advanced...

OK Cancel

Step 3: Open a browser, type **http://192.168.1.1**, and enter the default username and password, **admin/admin**.

Access Point

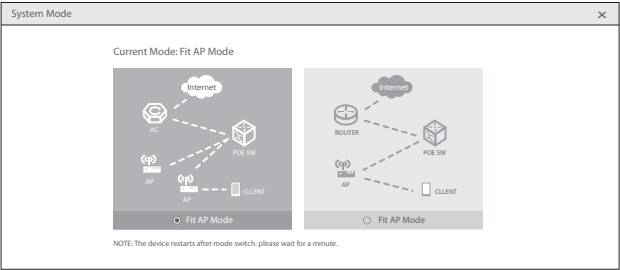

admin

\*\*\*\*\*

Login

Step 4: Click **Login** to display the web-based configuration page.

Step 5: Click the **System Mode Switch** to switch the FIT/FAP working mode.

**NOTE:** The access points work in Fit AP Mode by default.

### Configuring the AP Using the Console Port (FAT AP Mode)

- Step 1: Connect a computer to the AP's Micro USB port using the console cable.
- Step 2: Start the terminal simulation software such as HyperTerminal on the computer.
- Step 3: Set the parameters of the HyperTerminal: 9600 bits per second, 8 data bits, no parity, 1 stop bit and no flow control.

The screenshot shows a "Quick Connect" dialog box with a close button in the top right. It contains the following fields and options:

- Protocol: A dropdown menu set to "Serial".
- A text instruction: "The port may be manually entered or selected from the list."
- Port: A dropdown menu set to "COM3".
- Baud rate: A dropdown menu set to "9600".
- Data bits: A dropdown menu set to "8".
- Parity: A dropdown menu set to "None".
- Stop bits: A dropdown menu set to "1".
- Flow Control: A group box containing three unchecked checkboxes: "DTR/DSR", "RTS/CTS", and "XON/XOFF".
- Name of pipe: An empty text input field.
- At the bottom, there are four checkboxes: "Show quick connect on startup", "Save session", and "Open in a tab" (all unchecked), and a "Connect" button.
- At the bottom right, there is a "Cancel" button.

Step 4: After setting the parameters, click **Connect** to enter. And then enter the default password, **admin**.

**NOTE:** For more details, please refer to the Configuration Guide on the website.

## Troubleshooting

### LED does not light up after the AP is powered on

Verify that the power source is IEEE 802.11af/at compliant. And then verify that the cable is connected properly.

### Orange LED blinks after the Ethernet cable is connected

Verify that the device at the other end of the Ethernet cable is working properly. And then verify that the Ethernet cable is capable of providing the required data rate and is properly connected.

### Wireless client cannot find the AP

1. Follow the above-mentioned two steps.
2. Verify that the AP is configured correctly.
3. Adjust the transmit power.
4. Move the client device to adjust the distance between the client and the AP.
