S5900-24S4T2Q Switch FSOS Software Release Notes

Model: S5900-24S4T2Q

1. Introduction

Current Release	FS_S5900-24S4TSQ_2.2.0D_79390
Category	Firmware version
MD5	6B0D17843527398EE8970D2FBFBA3C3C

2. New Changes

2.1   V2.2.0D 79390

Bug Fixes Based on Baseline Version

1)   Solve the problem of compulsory rate save configuration under port and restart configuration loss.

2.2   V2.2.0 75705

Bug Fixes Based on Baseline Version

2)   Solve the memory leak caused by SSH.

2.3   V2.2.0 74782

Bug Fixes Based on Baseline Version

1)   Displayed as 0 when SNMP reads the management port data.

2.4   V2.2.0 70424

Bug Fixes Based on Baseline Version

1)   SSL certificate import is supported when logging in to HTTPS with a single device or four devices stacked. (HTTPS requires downloading a certificate to log in)

2.5   V2.2.0 70170

Bug Fixes Based on Baseline Version

1) Plug the Gigabit optical module into the 10 Gigabit port, which can auto-negotiate to Gigabit and the duplex mode is auto (no need to log in to the device for configuration commands).

2) Support TLS1.2 encryption algorithm under HTTPS.

3) Solve the error printing: 1 1 00:00:20 SSH: Enter file system failed.-927

4) Support 4 stacking, use 40G port.

5) Support 4 stacking, use 10G port.

2.6   V2.2.0 66315

Bug Fixes Based on Baseline Version

1）The 40G port cannot be registered and displayed after the switches are successfully stacked.
